

Project Design Phase
Problem – Solution Fit Template

Date	06 February 2026
Team ID	
Project Name	Car Rental Request Automation in ServiceNow Using Service Catalog and Workflows
Maximum Marks	2 Marks

Problem – Solution Fit:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why.

No.	Section	Content
1	Customer Segment(s) – CS	Customers/employees who need to rent a car for official or personal trips. Transport Team members who process approved rental requests.
2	Jobs-to-be-Done / Problems – J&P	Submit a car rental request, provide trip details, select a car type, get approval, track the request, and receive confirmation.
3	Triggers – TR	Need for a car for an upcoming trip; need to provide pickup and drop locations; need to select a suitable car; need to know approval status.
4	Emotions: Before / After – EM	Before: Uncertain about request status, frustrated with manual processing and delays. After: Confident, satisfied, and assured through automated processing and notifications.
5	Available Solutions – AS	Manual requests through email, phone or in-person communication; manual approval and coordination; ServiceNow-based automated car rental request system.
6	Customer Constraints – CC	Request process should be simple and easy to use. Required rental details must be provided. Approval may be required. Car availability can affect processing.
7	Behaviour – BE	User submits the request, enters date/location/duration/reason, selects car type, waits for approval, tracks the request and receives an email after approval.
8	Channels of Behaviour – CH	Online: ServiceNow Service Catalog, Request/RITM tracking and email. Offline: Phone or in-person communication with the Transport Team.

No.	Section	Content
9	Problem Root Cause – RC	Manual request and approval processes can cause delays. Request information is difficult to track manually. Task assignment and car-unavailability handling may require manual coordination.
10	Your Solution – SL	Car Rental Request Automation using ServiceNow: Users submit requests through the Service Catalog. The request goes for approval, an approved request creates a catalog task for the Transport Team, and an approval email is sent to the requester. A Business Rule handles car unavailability by creating an Incident.
