

Project Design Phase Solution Architecture

Date	15 February 2025
Team ID	
Project Name	Car Rental Request Automation in ServiceNow Using Service Catalog and Workflows
Maximum Marks	4 Marks

Solution Architecture:

The solution architecture provides an automated workflow for managing car rental requests using ServiceNow. Users submit their rental details through the Service Catalog, after which the request is sent for approval. Once approved, a catalog task is created and assigned to the Transport Team, and an approval notification is sent to the requester. The system also handles car unavailability through a Business Rule that creates an Incident. This architecture helps make the rental request process simple, organized, and easier to track.
